Build a Moxie Flyer!

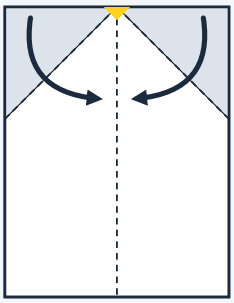

Print the design sheet, follow the 8 steps, and launch your own paper plane.

1

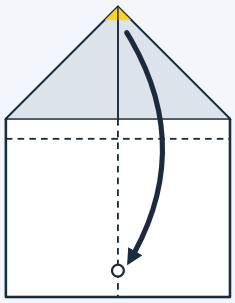

With the design facing **down** (yellow triangles at the top), fold the sheet in half the long way. Unfold.

2

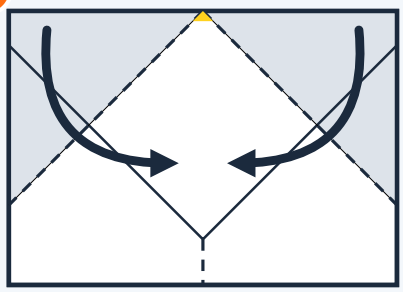

Fold the top two corners down to line up with the center fold.

3

Now you should be able to see the yellow triangles at the top. Fold the top half down so that the tip comes to about 1 inch above the bottom edge of the page.

4

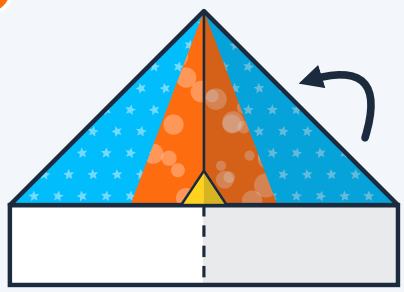

Again, fold the top two corners down so that they line up with the center fold.

5

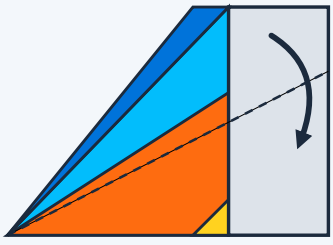

There should be a small triangle still showing. Fold that up.

6

Fold the entire plane in half, with the yellow, orange, and blue still facing out.

7

Now fold down the wings, creasing at the line where the blue and orange designs touch. Flip it over and fold the other wing to match.

8

You're ready to fly! Hold your plane just in front of the yellow triangle and gently push the plane forward, releasing it as your arm fully extends!

Flight school tip: Nose-diving? Bend the back edges of both wings up just a little. Flying in circles? Make sure both wings are the same size. Have a grown-up help with the creases if needed!
